

WriteLog NAME or FRIEND Files Instructions

File name **friend.ini**

Make sure the file downloaded okay by viewing the file with Notepad. The first few lines of the file should look like this:

```
[HI]
AA0AW=HI Doug
AC0LL=HI Bruce
AC0W=HI Bill
AC0X=HI Lou
AF9T=HI John
```

Next follow these instructions:

1. Save file in WriteLog program folder, most likely C:\Program Files\WriteLog\Programs
2. Under SETUP in CW – RTTY - SSB Memory Setup, enter %H to send Hi “friend name” in the appropriate message.
3. WriteLog.ini configuration file verify HI setting is set as **HI_SECTION=HI**
4. After starting WriteLog start WLFriend (see instructions below to set up)
5. This will bring a pop up window to display the name see screen shot next page
6. Name is displayed as soon as the call is recognized

To get WriteLog to display the name you need to load and run WIFriend, a utility written by OE8CIQ. Unzip the file to a folder and run SETUP. Unfortunately the set-up instructions are written in Austrian, but following the instructions below will work.

1. Exit all programs
2. Unzip WLFriend.zip, I put mine in C:\Program Files\WriteLog\Program\WLFriend
3. Open the folder above
4. Double click on Setup.exe to run it
5. Click OK
6. Click Verzeichnis wechseln to select folder to install in. I installed in C:\Program Files\WriteLog\Program\WLFriend
7. Click Setup beenden
8. Click YES
9. Click OK
10. Click OK
11. Click OK
12. Done
