

TR LOG

NAME or FRIEND Files Instructions

File name is **TR_MWA_Friends.asc**

Make sure the file downloaded okay by viewing the file with Notepad.

The first few lines of the file will look like this with the Club flag:

```
AA0AW =NDoug =AMN =QMN =XSTL =Y**MWA**  
AA0ZZ =NCraig =AMN =QMN =XRAM =Y**MWA**  
AC0B =NCliff =AMN =QMN =XSTL =Y**MWA**
```

Or like this without the Club flag:

```
AA0AW =NDoug =AMN =QMN =XSTL  
AA0ZZ =NCraig =AMN =QMN =XRAM  
AC0B =NCliff =AMN =QMN =XSTL
```

Using POST merge the file into TRMASTER database.

Procedure is executed with command POST U | E | F | F

From TR Manual:

Following the instructions should allow you to move callsigns and data from the file into the database. If you want to move more than one data field, you will have to execute the procedure once for each field.

When loading data from any file, you need to decide if you want the data in the file to overwrite any existing data in you database. You can control whether overwriting is enabled for each data field individually. Use the POST U | E | F | O menu to view and control this overwriting function.

To Send Name in CW:

% inserted in the message will send the name from the database
